

Take Advantage of the Upcoming End-Year Temporary Shutdown & Maintenance

“ Plant shut-down - even if referring to a temporary one – is often associated with long litany of negatives. However, there is a positive side of it. Planned shutdowns and maintenance are almost often undertaken because they are ultimately good for business. They lead to improvements in the performance of equipment and processes and enable product modifications. ”

Since maintenance work can in itself be hazardous, holiday temporary shutdown provides an exclusive opportunity to invigorate plant floor surfaces when workers are all safely out for the holiday.

Production and manufacturing facilities demand floors that can stand up to heavy machinery, traffic, chemical and acidic spills. Major concerns in industrial flooring systems are the effects of abrasion resistance and chemicals spills. Basically, industrial environment demands fit-for-purpose floors.

Fossilcote floors are a HACCP certified line of antimicrobial enhanced polyurethane and epoxy seamless floors. Some additional features of Fossilcote resin floors include: Excellent chemical and acid resistance, slip resistant, Excellent impact & wear, Seamless application and easy to clean.

Fossilcote market sectors include food and beverage, automotive, chemical manufacturing, aerospace, Health, Pharmaceuticals, General manufacturing, data Centre and transport industries.

Contact Fossilcote representative on technical guide and specification on different flooring systems that can withstand all the daily rigorous industrial activities. We guarantee you up to 10 years warranty on Fossilcote Flooring systems.

Take advantage of this period to transform your floors with Fossilcote Limited
